

A Light Glaze of Ice Possible Across Interior Tonight

OVERVIEW

A light wintry mix of snow, sleet, and freezing rain tonight across the interior. The main concern is for the occurrence of a light glaze of ice due to freezing rain.

Some light snow or sleet is possible across NYC/NJ metro, Long Island, and coastal CT at the onset this evening. No accumulation is expected and quickly changes to plain rain.

HAZARDS AND IMPACTS	<ul style="list-style-type: none">▪ Locations: Interior Lower Hudson Valley, interior southern CT, and Western Passaic County NJ.▪ Ice Accumulation - A trace to a few hundredths of an inch.▪ Snow/Sleet Accumulation - Little to no snow/sleet accumulation.▪ Timing – Wintry mix may start this evening, but the light freezing rain is most likely to occur overnight.▪ Impacts - Slippery travel and icing on untreated and elevated surfaces.
NWS ALERTS	<ul style="list-style-type: none">▪ A Winter Weather Advisory is in effect this evening into tonight for the Lower Hudson Valley, W Passaic and interior southern Connecticut.
FORECAST CHALLENGES	<ul style="list-style-type: none">▪ Surface temperatures could warm above freezing across the interior quicker tonight leading to less ice accumulation.▪ There is chance the light wintry mix ends up spotty rather than widespread.
NEXT BRIEF	<ul style="list-style-type: none">▪ This will be the only briefing for this event unless there are significant changes to the forecast.
